## WHAT IS CLAIMED IS:

1. An edge node that receives content from a NOC via a satellite link and distributes it to a last mile service provider, the edge node comprising:

one media server capable of serving both live and non-live content;

a private VLAN that receives content from the satellite link and distributes it to the media server; and

a public VLAN that transmits the received content from the server to a last mile service provider;

where the media server is connected to both the public and private VLANs; and where the media server, private VLAN, and public VLAN exist in a single computer.

- 2. The edge node of claim 1, further comprising a VPN connecting the public VLAN to the private VLAN.
- 3. The edge node of claim 2, where said VPN allows access to the private VLAN from a remote location.
- 4. An edge node that receives content from a NOC via a satellite link and distributes it to a last mile service provider, the edge node comprising:

a processor that executes code for serving both live and non-live content;
a satellite interface, connected to the processor, that receives content from the satellite link;

Express Mail No. EL920636895US

a wire network interface, connected to the processor, for transmitting content to the last mile service provider;

where the processor, satellite interface, and wire network interface exist in a single personal computer.
